

GLAC Records

Records are kept for all Track and Field events in all age groups. Any record can be broken at any GLAC event (this includes normal competition and Championships, unless otherwise stated) under the following criteria. All records must be verified by the Committee member in charge of records.

For track events, there are two methods by which the time is measured and a record may be equalled or broken – manually (Front and back straight and circular) and electronically (front and back straight). For manual timing, there should be 3 watches on the winner of all events – if (at least) 2 watches show the same time (rounded up to the next 1/10th of a second), that is the winning time – if all three are different, the middle time is given as the winning time. A fully electronic time is usually considered to be accurate enough for a record to be counted (see below for how to convert between electronic and manual) – there should always be two back-up manual times.

For all field events, performances must be measured using a steel measuring tape for a record to be substantiated. Record (or equal record) attempts in the high jump should be checked by the keeper of the records prior to the attempt. All high jumpers are allowed 3 attempts at an equal or new record (all other field event, athletes' only get 2 trials).

Where possible the GLAC uses full electronic timing on both the front and back straights. What is meant by full electronic timing is that the timing device is started by the gun and is stopped by the athlete passing the electronic eye on the finishing gates. In this way, the reaction time of timekeepers is removed at both the start and finish of these events. On some occasions, we have to revert to partial electronic timing with the use of the finishing gates, but the timing device is manually started. The removal of the timekeepers reaction time influences the time recorded for races – athletes are given slower times electronically than manually.

There is an international convention for comparing manual and electronic times – this has been, and will be observed for all GLAC records.

Converting manual time to standardised time (S) [undertaken for results commencing 2015-16 Season] - according to the international convention, and LAVIC Rule 260 (and to which GLAC adheres), all track events up to 300m Hurdles is to add 0.24s to the manual time; for 400m or 4x100m then add 0.14s.

E.g. A manual 100m time of 13.65 is rounded to nearest tenth of a second 13.7 and then standardised (S) using the addition of 0.24 for a standardised (S) time of 13.94. A time of 13.64 is rounded down to 13.6 and converted to standardised (S) time of 13.84.

- 2017/18 Handbook used as the basis for all records.
- * – Record conducted under previous standardisation convention ((rounding up/down).
- E – Recorded as Electronic (with manual start), and potentially not at LandyField.
- M – Manual
